**General data**

- Plastic case and insulating resin are self-extinguishing.
- Fixing holes in the case molding for two positions at right angles
- Direction of the current: A primary current flowing in the direction of the arrow results in a positive secondary output current from terminal  $C_{OUT}$ .

**Dimensions**

**Installation**

\* The positive direction of the current from the front to the rear of the head (the front of the contactor).

(Secondary\_Resistance + Measuring\_Resistance) x Max\_Secondary\_Current + 1V = 2V

Measuring\_Resistance = (2 - 1) / Max\_Secondary\_Current - Secondary\_Resistance

Therefore, Measuring\_Resistance = 1/(1/250) - 25 = 225 Ω

**Caution**

Be careful not to exceed 5.5V. The current sensor is damaged.
