General data

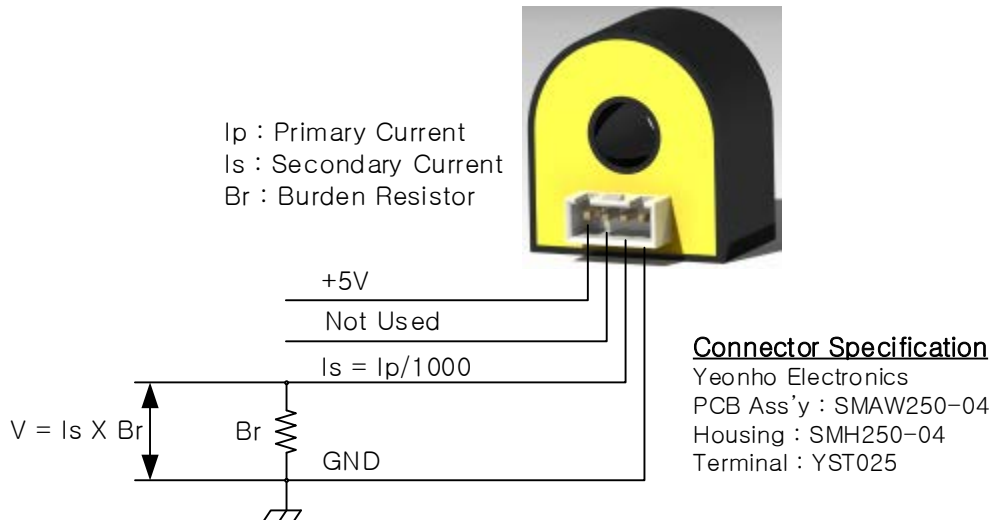

- Plastic case and insulating resin are self-extinguishing.
- Fixing holes in the case molding for two positions at right angles
- Direction of the current: A primary current flowing in the direction of the arrow results in a positive secondary output current from terminal C_{OUT} .

Dimensions

Installation

* The positive direction of the current from the front to the rear of the head (the front of the contactor).

$$(Secondary_Resistance + Measuring_Resistance) \times Max_Secondary_Current + 1V = 4.5V$$

$$Measuring_Resistance = (4.5 - 1) / Max_Secondary_Current - Secondary_Resistance$$

$$\text{Therefore, Measuring_Resistance} = 3.5 / (70 / 1000) - 45 = 5 \Omega$$

Caution

Be careful not to exceed 5.5V. The current sensor is damaged.
